Environmental Product Declaration

In accordance with ISO 14025 and EN 15804:2012+A2:2019/AC:2021 for:
Single product

Maxi Wrap

From

FireSeal

Programme:	The International EPD® System, www.environdec.com
Programme operator:	EPD International AB
EPD registration number:	EPD-IES-0025423
Publication date:	2025-08-15
Valid until:	2030-08-15

An EPD may be updated or depublished if conditions change. To find the latest version of the EPD and to confirm its validity, see www.environdec.com.

General information

Accountabilities for PCR, LCA and independent, third-party verification
Product Category Rules (PCR)
CEN standard EN 15804 serves as the Core Product Category Rules (PCR)
Product Category Rules (PCR): *PCR 2019:14 Construction products (EN 15804:A2)(2.0.1)*
PCR review was conducted by: The *Technical Committee of the International EPD System. See www.environdec.com for a list of members. Review Chair: Rob Rouwette (chair), Noa Meron (co-chair). The review panel may be contacted via the Secretariat www.environdec.com/contact.*
Life Cycle Assessment (LCA)
LCA accountability: *Tyréns Sverige AB*
Third Party Verification
External and independent ('third-party') verification of the declaration and data, according to ISO 14025:2006, via EPD verification through: ☒ Fully pre-verified EPD tool Third-party verifier: Accountable for the tool and EPD verification: Marcus Wendin, Miljögiraff AB, Fully pre-verified tool: Tyréns EPD-generator 3.1.0 – FireSeal. Approved by: The International EPD® System
Procedure for follow-up of data during EPD validity involves third party verifier: ☐Yes ☒ No

The EPD owner has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but registered in different EPD programs, or not compliant with EN 15804, may not be comparable. For two EPDs to be comparable, they must be based on the same PCR (including the same version number) or be based on fully-aligned PCRs or versions of PCRs; cover products with identical functions, technical performances and use (e.g. identical declared/functional units); have equivalent system boundaries and descriptions of data; apply equivalent data quality requirements, methods of data collection, and allocation methods; apply identical cut-off rules and impact assessment methods (including the same version of characterization factors); have equivalent content declarations; and be valid at the time of comparison. For further information about comparability, see EN 15804 and ISO 14025.

Company information

Owner of the EPD:
FireSeal AB, Kista, Sweden

Contact:
Christoffer Nyman
Christoffer.nyman@fireseal.com
+46 72 204 22 91

Description of the organisation:
FireSeal AB is a Swedish producer of fire protection products and systems, ranging from certified cable- & pipe penetration seals and HVAC in landbased- as well marine projects, to fire proof barriers for facades and lofts in the construction industry. FireSeal buys raw materials and components from a number of different producers, mainly situated in Europe, combine these components into systems which is tested and certified at accredited fire laboratories and then sell the certified solutions to customers within landbased segments (mainly in the Nordic European countries), as well marine & Offshore applications in the global market.

FireSeal is part of the Bergman & Beving Group, who is listed at the Swedish stock exchange market.

Product-related or management system-related certifications:

FireSeal AB is certified in accordance with
ISO 9001:2015
ISO 14001:2015

Name and location of production site(s):
FireSeal AB, Esbogatan 14, 164 74 Kista, Sweden

Product information

Product name: Maxi Wrap
Product identification: 100873, 100874
Product description: Maxi Wrap is a flexible tape consisting mainly of intumescent graphite. The tape is cut to the required length according to the table and customized after installation. When the temperature rises above 140°C, its swelling body expands and effectively seals the collapsing plastic pipe under high pressure.

Climate impact from the energy mix in production is 0,411 kg CO2 eq. per kWh (GWP-GHG).

UN CPC code: 3511

Geographical scope:
Module A1 and A2 Material suppliers are Global (European and Asian)
Module A3 production is located in Europe and Asia (Global)
Module C and D scenarios are for Sweden

LCA information

Functional unit / declared unit: 1 kg of fire protection product

Conversion factor for the product is 1 kg per kg

Reference service life: Not applicable

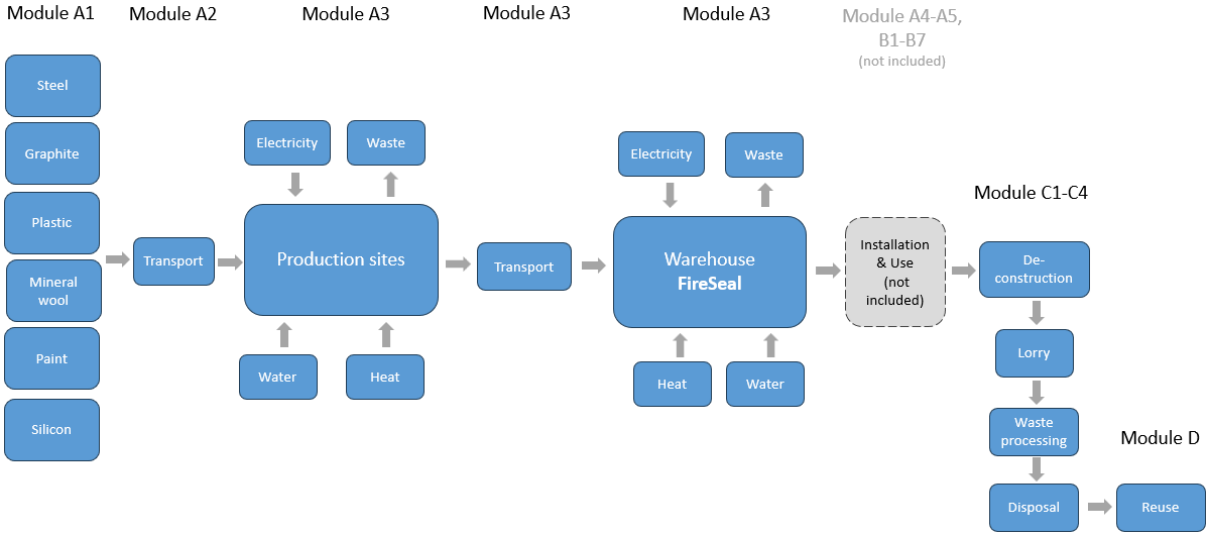
Time representativeness: The LCA is based on production data from 2024 but is deemed to be representative of an average year of production.

Database(s) and LCA software used: The LCA software is SimaPro Flow version 2.47 and the database is Ecoinvent 3.10. When modelling in Simapro, Ecoinvent data (updated November 2023) has been used for generic data.

Description of system boundaries:
Cradle to gate with options, C1–C4 and module D (A1–A3 + C + D)

Fully pre-verified EPD tool: This EPD is generated by Tyréns EPD-generator 3.1.0 – FireSeal. The tool is verified Marcus Wendin, Miljögiraff AB.

System diagram:



Production
Production is split between 8 producers across Europe and Asia.

The raw materials in the products from FireSeal varies from product to product, depending on producing company and production site, and include for example:
-Graphite
-Steel
-Sealant of silicone, polymer or acrylic mass
-Mineral wool
-Heat expanding (intumescent) paint

Each producer have their own production site, raw material suppliers and production line, and FireSeal AB have no direct control over these factors. Due to confidentiality parts of the production, supplier and logistics chain is undisclosed.

The finished products are transported to a warehouse in Ulricehamn, Sweden, from where FireSeal AB distribute them to retailers.

More information:
LCA practitioners: Johan Albihn and Ida Adolfsson at Tyréns Sverige AB

This EPD is generated with a fully pre-verified EPD tool. All processes are fixed and variable input data for each product governed by a menu. The results of the EPD is checked for plausibility. The review of the EPD-generator its constituent processes and the fixed content of the EPD is accepted based on the verification of the tool and the first EPD verification by the tool. Identification name and version number of the EPD-generator: EPD-generator 3.1.0 – FireSeal.

Results for the additional impact categories particulate matter, ionising radiation, ecotoxicity (freshwater), human toxicity (cancer), human toxicity (non-cancer) and land use is not declared.

EN 15804 reference package based on EF 3.1 has been used.

Electricity data
The electricity mix for each production facility, as well as the warehouse, has been modelled using the residual or market group mix for the respective country.

Climate impact for the residual energy mix used in the warehouse (Ulricehamn, Sweden) are 0.0696 kgCO2eq. per kWh (GWP-GHG).

Estimates and assumptions
-The electricity mix (A3) is assumed to be residual for factories not using a single EPD as input data, due to the origin being unknown or confidential.
-The dismantling of the product in C1, is allocated to demolition of the building.
-95% of plastic is assumed to be energy recovered, C3.
-95 % of steel is assumed to be material recovery, C3
-5% of plastic and steel are assumed to end up in a landfill, C4.
-Glass fibre, graphite and mineral wool are assumed to end up in its entirety in landfill, C4.
-Sealants are assumed to be inseparable from the material it's attached to, such as gypsum or steel, and therefore a landfilling scenario has been assumed, C4.
-Energy recovery from municipal waste will be replacing Swedish district heating production and Swedish electricity production in D.

Assumptions are made for the full range of products from FireSeal, and all assumptions are therefore not necessarily relevant for the product in this EPD.

Background data

The data quality of the background data is considered good. The assessment considers all available data from the production process, including all raw materials and auxiliary materials used as well as the energy consumption in relation to available Ecoinvent 3.10 datasets and EPD's.

The infrastructure or capital goods used in the product system for underlying processes are included for upstream and downstream processes, as infrastructure or capital goods can NOT be excluded in SimaPro FLOW. Therefore results of the impact categories abiotic depletion of minerals and metals, land use, human toxicity (cancer), human toxicity, noncancer and ecotoxicity (freshwater) may be highly uncertain in LCAs that include capital goods/infrastructure in generic datasets, in case infrastructure/capital goods contribute greatly to the total results. This is because the LCI data of infrastructure/capital goods used to quantify these indicators in currently available generic datasets sometimes lack temporal, technological and geographical representativeness. Caution should be exercised when using the results of these indicators for decision-making purposes. For core module infrastructure or capital goods are excluded.

Data quality

When modeling in Simapro, Ecoinvent data (updated 2023) has been used for secondary data. The database is considered to be of high quality. For the majority of material supplier's product specific and third party verified EPD's has been used. The EPD's used is of high quality.

Input data are gathered from the actual manufacturing plant with product-specific processes, specific amounts, specific waste, and spillage %, specific energy mix, specific transportation distances and transportation type and EPD's from some of the suppliers are primary data. Primary data are collected directly from supplier and production site.

The percentage primary data is estimated in this EPD for module A1-A3. Primary data are related to amount of energy, transportation and direct emission used throughout module A1-A3 and underlying EPD:s. The reported share of primary data is associated with uncertainty, as one or several EPDs that are used as data source lack information on the share of primary data used.

The share of primary data is calculated based on GWP-GHG results. It is a simplified indicator for data quality that supports the use of more primary data, to increase the representativeness of and comparability between EPDs. Note that the indicator does not capture all relevant aspects of data quality and is not comparable across product categories.

Modules declared, geographical scope, share of primary data (in GWP-GHG results) and data variation (in GWP-GHG results):

	Product stage			Construction process stage		Use stage							End of life stage				Resource recovery stage
	Raw material supply	Transport	Manufacturing	Transport	Construction installation	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	De-construction demolition	Transport	Waste processing	Disposal	Reuse-Recovery-Recycling-potential

Additional information

ID: EPD Calculation FireSeal 18-08-2025 09:24

Calculations has been made for the materials that have a mixed disposal scenario, such as 95% incineration and 5% landfilling, and what the results in GWP-GHG [kg CO2 eq./kg] would be should one scenario be chosen for the entirety of the disposal. The comparison can bee seen in the table below. The table can then be used together with the product content declaration to construct custom End-of-Life scenarios for different products.

Material	C1 [kg CO2 eq./kg material]	C2 [kg CO2 eq./kg material]	C3 [kg CO2 eq./kg material]	C4 [kg CO2 eq./kg material]	Comment
Steel					
-Material recycling 100%	4.0E-04	1.5E-02	2.6E-02	0	
-Landfill 100%	4.0E-04	1.5E-02	0	3E-03	
Plastic					
- Incineration 100 %	4.0E-04	2.5E-02	2.4E+00	0	
- Landfill 100 %	4.0E-04	1.5E-02	0	3E-03	

Scenarios are made for the full range of products from FireSeal, and all scenarios are therefore not necessarily relevant for the product in this EPD.
